

NEW GENERATION INVERTER BLDC HIGH PERFORMANCE SELF-CONTAINED UNIT

SEPARATED ELECTRICAL PANEL

135° ADJUSTABLE AIR OUTLET

ADVANTAGE OF USE

- Very compact design and low weight
- 50% higher energy efficiency compared to ON/OFF
- Highest comfort: silent operation and stable temperature
- Lowest consumption: 150-200 W max input power in ECO mode
- Elimination of peak current at start-up (only 2 A max)

ACCESSORIES

WI-FI MODULE WITH CONTROL APP

UVA/C LED AIR STERILIZER KIT

EASY INSTALLATION

The compact overall dimensions and low weight allow the installation onboard all types of boat

NEW BLDC INVERTER GENERATION SMALLER, LIGHTER AND MORE POWERFUL

THE FIRST MARINE AIR CONDITIONING SYSTEM WITH THE BLDC INVERTER TECHNOLOGY

ULTIMATE VARIABLE FREQUENCY DRIVE TECHNOLOGY

VFD technology "sensor less" is used to accurately control the compressor speed in order to deliver the needed capacity at all times, following the environmental conditions; by contrast traditional air conditioners use on/off type compressors that either work at maximum speed or stop.

The Frigomar self-contained unit is equipped with a BLDC motor compressor (98% energy efficient) controlled by an electrical inverter varying the speed from 20-100 Hz. Thanks to the elimination of start-stop cycles the energy efficiency is considerably increased without sharp fluctuations of air temperature and power supply, thus increasing the lifespan of the unit and the comfort on board.

ENERGY SAVING (-50% ON AVERAGE ELECTRICAL ENERGY CONSUMPTION)

Compressor starts at low speed (20 Hz) with no peak current and then accelerates smoothly up to the max frequency (100 Hz) in order to cool or heat quickly. As room temperature approaches the set point value, the compressor slows down, keeping a constant temperature in silent operation and saving energy. In term of Seasonal Energy Efficiency Ratio, the average reduction in electrical energy consumption is 50%, compared to the equivalent traditional air conditioner.

SMOOTH STARTING (NO PEAK CURRENT AT START)

Starting ramp is set at low frequency (20 Hz) allowing very low starting torque and starting current, far below the nominal value. The max starting current is 2 A, while for the equivalent traditional air conditioner the max peak starting current is 20-30 A, despite employing soft starting devices.

POWERFUL

Inverter air conditioning operates at maximum capacity after start up, therefore the set temperature is reached more quickly.

COMFORTABLE

Inverter air conditioner finely adjusts its capacity according to the thermal loads variation in order to maintain the desired ambient temperature without fluctuations, thus allowing higher comfort than with non-inverter air conditioners. Thanks to PMSM motor, sound shield and ventilation design the operation is very silent in every working condition.

VARIABLE CAPACITY OPERATION (ECO FUNCTION)

ECO function is activated by selecting the minimum fan speed, in order to further reduce the power consumption.

RELIABLE

BLDC motor together with accurate control of superheating allow a much longer compressor lifespan than non-inverter models, where start / stop cycles stress considerably the motor windings. Thanks to VFD technology the unit withstands very low seawater temperature (5°C/41°F) in winter and very high seawater temperature (45°C/113°F) in summer.

EASY INSTALLATION

Very compact dimensions with possibility to detach the electric box, if needed, for simplifying the installation.

ACCESSORIES ON DEMAND

- Air exit adapters (from square to round shape, from round to oval)
- Stainless steel fixing brackets for wall mounting the electric box
- WI-FI module
- Air UVA/C sterilizer kit

COMPLY WITH EMC DIRECTIVE

The equipment complies with the Electromagnetic Compatibility (EMC) Directive 2004/108/EC.
